

Data Collection Form — Sample Application

POOR EXAMPLE

Research Title

AI Feedback on Writing and Students Engagement

1. Research Purpose and Scope

This research is about AI and how it helps students improve their English writing.

The aim is to see whether AI is useful in providing feedback on writing assignments and can engage students in the revision stage. The study will investigate students' opinions and maybe their writing performance.

2. Participants and Data Collection

The participants will be students from the FPES0603. The number depends on how many are available.

Data will be collected using questionnaires, interviews, and possibly writing tasks. The researcher will collect the data during the Spring 2027 semester.

3. Risks, Interventions, and Permissions

There are no potential risks.

The researcher will ask students to use ChatGPT in their writing classes. There is no clash with the pacing schedule. No special permissions are needed.

4. Consent and Participant Protection

Students will be informed about the research and asked to participate. They will complete a consent form.

The researcher expects students to cooperate because the study is educational and may improve their writing.

5. Confidentiality and Data Security

Student information will be kept confidential.

The researcher will save the data on a personal laptop and will remove it when the paper is published..

The data will be kept as long as necessary.

6. Research Proposal and Supporting Materials

The questionnaire and interview questions have not been finalized and will be prepared later.

The researcher will use questions from previous studies.

Other documents can be provided if the committee requests them.
