### **12.** Course Description

Microeconomics is generally taught in a series of two courses, Applied Microeconomics I and II. Applied Microeconomics I (NRE3301) is the part deals with the microeconomic theory and its applications. It focuses on consumer and producer theories in competitive markets. The course proceeds with studying supply and demand basics, besides consumer behavior, individual and market demand, and uncertainty. Also, it covers the issues related to the producer like production, production cost, profit maximization, and competitive supply, and ends with analyzing competitive markets. Students learn here will form much of their basic knowledge, which will support their understanding of the courses depending on microeconomics concepts.

### **13.** Teaching/Learning Strategies

- Each week's lesson builds on what students have learned prior to that and progressively introduced new concepts and their applications in microeconomic context. The interrelationship between concepts is explained graphically and the plausible chain reactions are established through cause and effect analysis.

- Each introduced concepts are supported by examples of local and regional origin that students are acquainted with. This is to encourage students' active engagement in learning. During the course relevant economic data and information that are gathered from various government agencies in Oman are presented and used as a basis of class discussions and model building.

- The assignments (in the form of class test) and exams are designed to assess the conceptual, analytical, and problem solving skills.

#### 16. Student Responsibilities

It is the student's responsibility to know and comply with all University Academic Regulations relevant to participation in this course. These regulations specifically include attendance requirement and students' academic code of conduct.

For attendance, it is the student's responsibility to be punctual and to attend all classes.

Students are expected to perform their work with honesty and avoid any academic misconduct, which is defined as the use of any dishonest or deceitful means to gain some academic advantage or benefit. This can take many forms, including but not limited to, the following: copying, plagiarism, collusion and forging documents. For full details, please refer to the Undergraduate Academic Regulations and to the Student Academic Misconduct Policy.

Additionally, this course requires that you:
