	☐ Tutorial	Lab or Practical			
	Field Work	Field Placement			
	Studio	Seminar			
	☐ Internship	Workshop			
	English Language Skill	Project			
Language of	English				

#### **Course Description**

This course is aimed at providing the student with a comprehensive introduction to the most important topics in aridity and arid zone hydrology/hydrogeology and its environment. The course will discuss the basics and characteristics of hydrology in arid regions. Students will gain basic knowledge about factors that cause aridity, why Oman and the Arabian Peninsula is an arid zone. The course starts with discussing characteristics of arid zone and reasons of aridity and climate of Oman and the Middle East. It will be followed by key environmental issues such as aquifer mining, seawater intrusion, artificial recharge, desertification, and greening deserts. Students will learn techniques to analyze extreme hydrologic events, spatial dependence of hydrological features, spatial and temporal variability of hydrological events as rainfall and features of runoff. Computer simulations that enable the students to explore different scenarios in management or investigate the most likely outcome of a course of action in hydrological systems will be covered.

### Teaching/Learning Strategies

#### **Evaluation Methods**

### Home work Assignments

Home work assignments will be due in most of the cases by one week (otherwise due dates will be announced). Team work is encouraged but does not mean that each assignment is done by only one team member without the contribution and involvement of all team members. Instructions for home work and reports preparation will be given in class. All home work assignments should be very well written with MSWord and neat. All Assignments should be submitted on time. Late home works and reports are not accepted, and will automatically result in a grade equal to zero.

#### Paper Review

Selected published papers (or a topic) asscoaited with Arid zone hyfdrology will eb assigned to group of studenets. Studenets are asked to develop an excllent understanding of their selected title by reading the literature, then deliver a 15 min presentation to the class followed with 15 min of discussion. Stuxents will be evaluated by a poanel (invited instructoers) based on a set of critrion as: clarity of presentation, knowledge of the subject, style of presentation and quality of the slides, and performance in the queation and answer session. Questions about the material discussed by the selected paper will be included in the final exam.

### Tests

There will be two tests each of one hour duration. The tests will count for 20% of the course mark.

### Final Exam

This will be a three-hour examination and the date and time will be announced by the University timetabling office prior to exams.

#### Mark Scheme

The final course grade will be weighted according to the following scheme:

(1)	Homework Assignments, paper review, presentation & discussion	10%
(2)	Test 1(Thursday lecture, week 6)	20%
(3)	Test 2(Thursday lecture, week 12)	20%
(4)	Final Exam	50%
Total.		100%

## Required Course Core Material

The following books, chapters and journals are the reading materials for the course:

#### Textbook:

• Wadi Hydrology textbook: Zekai Sen, 2008, Wadi Hydrology, Crc Press. ISBN:1420061542 along with chapters or sections from a number of textbooks along with published papers from different sources will be distributed to the students during the lectuers. Those includes:

- Todd, D. K., 1980. Groundwater Hydrology, Second Edition, John Wiley & Sons, Inc., USA (Chapter 4, 13, and 14) from.
- Maliva, R., Missimer, T., 2012. Arid Lands Water Evaluation and Management. Springer Heildberg. ISBN 978-3-642-29103-6
- Zekai Sen, 2008, Wadi Hydrology, Crc Press. ISBN:1420061542

### Number of journals

(To chase update in the field of arid zone hydrology)

- 1. Journal of Arid Environment, Copyright © 2008 Academic Press.
- 2. Advances in Water Research, Copyright © 2008 Elsevier B.V. All rights reserved, Shortcut URL to this page: http://www.sciencedirect.com/science/journal/03091708
- 3. Journal of Hydrology, Copyright © 2008 Elsevier Ltd. All rights reserved Shortcut URL to this page: http://www.sciencedirect.com/science/journal/00221694

#### Matching Course Objectives with Program Outcomes and SOU Graduate Attributes **SQU Graduate Attributes** SQU graduates should be able to: SQU graduates possess SQU graduates should apply the knowledge and skills interpersonal communication skills relish good citizenship relevant to the specialization and alignment with culture of qualities, conscious of communicate effectively and use international labour market to their national identity information and communication assist them in practical life and in and socially responsible, technologies living successfully engage in community critically analyze complex skills and motivation for affairs and mindful of information and present it in independent learning and contemporary issues. simple legible manner engagement in lifelong learning and research work ethics and positive values, and intellectual independence and autonomy teamwork skills and display

potential leadership qualities

#	Course Learning Objective	Relevant Program Outcome(s)	Applicable Attribute(
	Develop a conceptual understanding of arid environment, causes of aridity and how to measure the degree of dryness in a certain location as well as highlighting the main characteristics of arid zone environment. (Objectives A, and B).	Objective A: Provide the required knowledge and skills to solve water resources management problems in arid regions.	SQU attribute "A1"
		Objective B: Develop the abilities to stay current with new developments in the field of Water technology.	
	Provide the students with the necessary skills in analyzing hydrological data of climatological processes (as rainfall, runoff) that are complicated	Objective A: Provide the required knowledge and skills to solve water	SQU attributes "A1", and

by there sporadic and erratic patterns. Methods used in analyzing rainfall and runoff data will be	resources management problems in arid regions.	"A2", and "A3"
covered. (Objectives A, and B).	Objective B: Develop the	
	abilities to stay current	
	with new developments	
	in the field of Water technology.	
Knowledge about hydrological features in Oman (ephemeral wadies flow, springs, AFlaj system, and Sabkhas) (Objectives C, D, and E).	Objective C: Develop an ability to identify, formulate and solve technical problems in the	SQU attributes "A3", "B1", "B2", "B3",
	field of water resources including irrigation, water & wastewater treatment, water supply	"B4", and "C".
	and desalination.	
	Objective D: Impart technical skills, modern problem solving tools,	
	on-the-job training to the	
	students to enable them	
	contribute effectively in the Omani water sector.	
	Objective E: Develop abilities to communicate	
	effectively, to work in	
	multi-disciplinary teams, and to understand	
	professional and ethical responsibility.	
Equip the students with good modeling skills in the area of seawater intrusion, aquifer mining, artificial recharge, and flood prediction.	Objective A: Provide the required knowledge and skills to solve water	SQU attributes "A3", "B1",

### Student Responsibilities

It is the student's responsibility to know and comply with all University Academic Regulations relevant to participation in this course. These regulations specifically include attendance requirement and students` academic code of conduct.

For attendance, it is the student's responsibility to be punctual and to attend all classes. Students are expected to perform their work with honesty and avoid any academic misconduct, which is defined as the use of any dishonest or deceitful means to gain some academic advantage or benefit. This can take many forms, including but not limited to, the following: copying, plagiarism, collusion and forging documents. For full details please refer to the Undergraduate Academic Regulations and to the Student Academic Misconduct Policy.

Additionally, this course requires that you:

Failure to take an exam or submit a scheduled assignment will result in an automatic grade of zero. Under exceptional conditions, a medical condition may entitle a student to make up a missed test or assignment, provided that a medical certification extended by a licensed physician is presented within 2-3 days of the scheduled time of the exam or due time of the assignment. The certification must be submitted to the instructor together with an explanation on how/why the medical condition prevented the student from fulfilling his/her course work.

#### **Collaboration Policies:**

You can consult each other while working on the home works, but all the work that you submit must be your own. There will be group home works also. Discuss the assignments among yourselves. This is helpful to the learning process. However, direct copying of others work will NOT be allowed or tolerated and will result in a considerable reduction of grade.

#### Attendance Policy:

Attendance to lecture is compulsory by the university laws. Homework, reports, and test questions depend heavily on lectures and instructions provided during the lectures. Past experience shows that failure to attend lectures regularly leads to deficient grades in this course. Quizzes will be given during lectures without prior notices.
